JMIR Aging is dedicated to publishing research using technological innovations and data science to inform and improve health care services and health outcomes for older adults. The journal focuses on digital health, emerging technologies, and health informatics applications for aging populations. This includes home, community, and clinical care settings, and the spectrum of care for older adults, their families and caregivers, such as patient and family education, preventative care, clinical care, home care, and self-management support. Topics also include aging-focused data analytics from information systems like electronic health records, insurance claims databases, or national health system databases.

JMIR Aging is a valuable resource for physicians, nurses, allied health professionals, advanced clinical practitioners, patients, and caregivers, ensuring that research we publish reaches those who benefit most from new findings. By focusing on technological innovations and data science, *JMIR Aging* provides a vital platform for research that directly contributes to enhancing the well-being and care of the aging population.
