Medical Informatics

ISSN 2291-9694

JMIR Medical Informatics is an open-access journal that focuses on the challenges and impacts of clinical informatics, digitalization of care processes, and clinical and health data pipelines from acquisition to reuse, including semantics, natural language processing, natural interactions, meaningful analytics and decision support, electronic health records, infrastructures, implementation, and evaluation. The journal prioritizes research that bridges theoretical frameworks with actionable insights, ensuring that informatics solutions demonstrate measurable clinical or population impact.

JMIR Medical Informatics focuses on applied, translational research and implementation science. Submissions that advance data shareability, reusability, and interoperability within real-world health systems are welcome. The journal also features implementation reports (since 2022) that systematically describe the translation of informatics solutions into routine clinical environments.
