*\* Highest quartile ranking  
in top-ranked JCR category*

*JMIR Infodemiology* focuses on infodemiology, a discipline studying the determinants and distribution of health information and misinformation on the internet, and its effect on both public and individual health. The World Health Organization (WHO) recognizes infodemiology as a vital pillar in managing public health emergencies, and the field rapidly gained momentum due to the COVID-19 pandemic and the development of widely available generative artificial intelligence tools. *JMIR Infodemiology* is the first and only journal dedicated journal in this burgeoning interdisciplinary field.

The journal brings together thought leaders in policy, public health, research, data science, and communications to explore critical areas such as information monitoring (infoveillance and social listening), eHealth literacy and science literacy, and processes and policies for knowledge refinement and quality improvement. **JMIR Infodemiology** also explores the influence of political and commercial interests on knowledge translation and dissemination.
